

INSTRUCTIONS TO THE AUTHORS

Submit manuscripts electronically to: Robert J. Ursano, M.D.
Psychiatry, USUHS, 4301 Jones Bridge Road, Room B3068
Bethesda, MD 20814-4799
Phone: 301-295-9797
psychiatry619@gmail.com

PSYCHIATRY: *Interpersonal and Biological Processes* seeks an integration of interpersonal and biological perspectives in the formulation and testing of important ideas in psychiatry and mental health, addressed to serious students of problems in these fields. The Journal presents the highest quality quantitative research, vivid reports of qualitative data, illustrative case reports and clinical studies, synthetic theoretical essays, accounts of scientific meetings and colloquia, surveys and critiques of scientific literature, and reviews and commentary on published work. Psychiatry is focused on contributions that foster a thoughtful integration of biological and interpersonal reasoning.

Manuscripts are submitted to PSYCHIATRY with the understanding that they have not been published or accepted for publication elsewhere, in whole or in part, and that they are not being simultaneously considered by any other publisher. The receipt of manuscripts is acknowledged promptly, and a decision is reported to the author as rapidly as a careful evaluation procedure permits. Articles are accepted subject to editorial modification in accordance with the Journal's style and requirements.

Since PSYCHIATRY is an interdisciplinary journal, articles submitted should be written in a style communicative to readers outside the author's field. All articles should be submitted online and include a title page and be accompanied by a cover letter with three suggested reviewers and their contact information. Regular article manuscripts should be double spaced and must begin with a structured abstract of no more than 250 words. The abstract should be organized by: *Objective* (the purpose of the article); *Method* (data sources, subjects, design, measurements, data analysis); *Results* (key findings); and *Conclusions* (implications and future directions.) Regular articles should not exceed 5000 words excluding the abstract, references, tables, and figures. There should be no more than 40 references and 5 tables and figures. Word count of the manuscript, abstract, and references and the number of tables and figures should be noted in the upper right-hand corner of the title page. All pages must be numbered. A biographical footnote listing each author, their degree(s), and their institutional affiliation is required, as is the full address of the corresponding author. The corresponding author is responsible for ensuring that all named authors concur with the submission. It is also the corresponding author's responsibility to verify all references and quotations. The reference style should adhere to American Psychological Association format. Authors should avoid using abbreviations and acronyms as well as trade names for pharmacological agents. Prior to submitting reviews the author should contact the editor. Tables should be submitted in Excel. Tables formatted in Microsoft Word's Table function are also acceptable. (Tables should not be submitted using tabs, returns, or spaces as formatting tools.) Figures should be submitted separately as graphic files (e.g., .jpg, .tif, .ppt, .xls, .pdf, .bmp, .gif, etc.) in the highest possible resolution. Figure caption text should be included in the article's Microsoft Word file.

For clinical trials the name of the trial registry, registration number and URL of the registry must be included. Authors must also provide information about how consent was granted for obtaining data from research subjects or from patients who are described in clinical reports. If consent has not been obtained from patients in ongoing or in completed treatment with the author or a colleague, the author must describe why consent was not obtained as well as how the manuscript protects confidentiality. A cover letter to the editor should provide information on consent or confidentiality or indicate where in the manuscript this information is given.

The Journal subscribes to the current policies of the NIMH Consortium of Editors for the publication of data on the social class, ethnicity, and gender of research samples. Please consult the statement describing this policy before submitting a manuscript. Except where explicitly stated, the journal conforms to the Uniform Requirements for Manuscripts Submitted to Biomedical Journals, which can be found at icmje.org. Permission must be requested for lengthy quotation, reprinting, or other reproduction material published (or accepted) by PSYCHIATRY.
